```

New artificial promoter libraries - containing consensus promoter sequences and variable spacers, used to generate promoters for optimising expression of genes.

This is a Saccharomyces cerevisiae promoter sequence used in the construction of an artificial promoter library of the invention.

```

New artificial promoter libraries - c sequences and variable spacers, used expression of genes.

containing consensus promoter to generate promoters for optimising

WPI; 1998-179062/16.

Claim 28; Page 63; 89pp; English.

This is a Saccharomyces cerevisiae promoter sequence used in the construction of an artificial promoter library of the invention. The

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                 Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 promoter
     This is a Saccharomyces cerevisiae promoter sequence used in the construction of an artificial promoter library of the invention.
                                                                                               New artificial promoter libraries - containing consensus promoter sequences and variable spacers, used to generate promoters for optimising expression of genes.
                                                                                                                                                                        WPI; 1998-179062/16.

AAZ01425_08

This is a Saccharomyces cerevisiae promoter sequence used in the construction of an artificial promoter library of the invention.

The

Claim 28; Page 64-65; 89pp; English.

New artificial promoter libraries - containing consensus promoter sequences and variable spacers, used to generate promoters for optimising expression of genes.

```

This is a Saccharomyces cerevisiae promoter sequence used in the construction of an artificial promoter library of the invention.

The

New artificial promoter libraries - containing consensus promoter sequences and variable spacers, used to generate promoters for optimising expression of genes.

WPI; 1998-179062/16.

This is a Saccharomyces cerevisiae promoter sequence used in the construction of an artificial promoter library of the invention. The

Claim 28; Page 66; 89pp; English.

New artificial promoter libraries - containing consensus promoter sequences and variable spacers, used to generate promoters for optimising expression of genes.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB DB

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Saccharomyces cerevisiae; yeast promoter; opt: artificial promoter library; gene expression; Saccharomyces cerevisiae promoter Yp89. 8. .190 /*tag= a /standard_name= "Yeast promoter" Location/Qualifiers BP. optimise; spacer; ion; ds

This is a Saccharomyces cerevisiae promoter sequence used in the construction of an artificial promoter library of the invention. The

New artificial promoter libraries - c sequences and variable spacers, used expression of genes.

containing co

consensus promoter e promoters for optimising
